

Aryan Vaghasiya

Data & AI Intern | Machine Learning & GenAI & AgenticAI

Surat, Gujarat, India | arianvaghshiya11@gmail.com | +91 9313626318 | LinkedIn

EDUCATION

C.K. Pithawala College of Engineering and Technology

Bachelor of Engineering in Information Technology (Affiliated with GTU)

Cumulative CGPA: 8.67/10.0

Surat, Gujarat

Expected May 2026

PROFESSIONAL EXPERIENCE

Microsoft Corporation

Data & AI Intern

Virtual

July 2025 – July 2025

- Leveraged **Azure AI Fundamentals** to architect scalable cloud solutions and data-driven analytical applications.
- Developed a **Natural Language Processing (NLP)** solution utilizing Azure AI Language services (AI-3003) to extract insights from text.
- Implemented advanced **Generative AI models** within Azure Machine Learning to automate complex text generation tasks.
- Conducted high-level data analysis and transformed datasets into interactive visual insights using **Power BI** (PL-300 standards).

KEY TECHNICAL PROJECTS

Agentic AI & LLM Workflows

Python, LangChain, LangGraph, LangSmith

- Designed **Agentic AI workflows** utilizing LangGraph for multi-step reasoning, dynamic decision-making, and autonomous task execution.
- Integrated **LangChain** to connect Large Language Models with external data sources, proprietary APIs, and custom Python toolsets.
- Utilized **LangSmith** to establish evaluation pipelines, debugging and monitoring prompt efficiency and overall application latency.

Tri-Modal Health Screening System

Python, Machine Learning, Multimodal Data

- Architected a multimodal machine learning system to predict lung infiltration, significantly enhancing automated diagnostic capabilities.
- Engineered robust data pipelines to simultaneously process, synchronize, and analyze visual imagery, tabular clinical records, and signal data.

Bank Customer Churn Prediction (ANN)

Python, TensorFlow, Deep Learning

- Designed and trained an **Artificial Neural Network (ANN)** to accurately forecast customer churn rates for client retention strategies.
- Processed 10,000+ records, executing rigorous feature scaling, categorical encoding, and handling class imbalances to optimize generalization.

Heart Disease Prediction Model

Python, Scikit-learn, Pandas

- Developed a predictive Machine Learning classification model to evaluate heart disease likelihood based on critical clinical parameters.
- Conducted **Exploratory Data Analysis (EDA)** to uncover statistical correlations between age, cholesterol, and cardiovascular conditions.

PUBLICATIONS & ACHIEVEMENTS

- Author:** Published *"The Happiness Blueprint: 100 Ways to Build a Joyful Life"* and *"God make for something big"*, books detailing structured frameworks for personal development, resilience, discipline, and achieving long-term goals.

TECHNICAL SKILLS

- Generative AI & NLP:** Agentic AI, LangChain, LangGraph, LangSmith, LLMs, Azure AI Language.
- Machine Learning & Data Science:** Mathematics for ML, TensorFlow, Scikit-learn, Pandas, NumPy, Matplotlib.
- Backend & APIs:** REST APIs, Python, SQL, C, Java, PHP.
- Cloud & Databases:** Microsoft Azure (AI Language, ML Studio), Power BI, MySQL, SQLite.

CERTIFICATIONS

- Internship:** Microsoft Data & AI Skills (2025) | **Data Analytics:** Introduction to Power BI (2025)
- In Progress:** Azure AI Fundamentals (AI-900) | Microsoft Power BI Data Analyst (PL-300)
